ABOUT THE MEETING

This slide seminar has been designed to be different from other offerings, in that traditional lectures have been replaced by interactive digital slide seminars. Each seminar is designed to provide a review of key topics in different areas of surgical pathology, including breast, gynecologic, orthopedic, head and neck, and soft tissue pathology. The course provides an update and an overview of some of the most important diagnostic features which allow the practicing pathologist to make accurate diagnoses, as well as clues as to how to avoid the common diagnostic pitfalls. Also included is a discussion of appropriate ancillary diagnostic techniques which help to serve in rendering a final diagnosis. There will be extensive time for discussion with faculty members, not only during the slide seminars, but between seminars.

TARGET AUDIENCE

This CME activity is primarily designed to educate practicing pathologists.

ACCREDITATION

Physicians: Educational Symposia is accredited by the Accreditation Council for Continuing Medical Education (ACCME) to provide continuing medical education for physicians.

Educational Symposia designates this live activity for a maximum of 15.0 *AMA PRA Category 1 Credit(s)*[™]. Physicians should claim only the credit commensurate with the extent of their participation in the activity.

Credit(s) for this activity will be available to virtual participants as long as sessions are viewed in real time (i.e., viewing recorded sessions at a later date/time does not qualify for credit).

EDUCATIONAL OBJECTIVES

Attendees should, at the completion of this course, be able to:

- Discuss the most common patterns seen in soft tissue tumors.
- Recognize the most commonly used immunohistochemical and molecular techniques used in the diagnosis of soft tissue tumors.
- Identify the limitations and potential pitfalls of immunohistochemistry and molecular testing in head and neck pathology.
- Cite the most important changes in the WHO classification of cartilaginous neoplasms.
- Differentiate the most common benign and malignant cartilaginous tumors.
- Utilize information on the uses and limitations of immunohistochemistry in resolving diagnostic problems in breast core needle biopsy specimens.
- Review the updated guidelines for ER, PR, and HER2 testing in breast cancer.
- Recognize the uses and limitations of immunohistochemistry in resolving diagnostic problems in spindle cell lesions of the breast.
- Describe the most common differential diagnoses in genitourinary pathology.
- Provide accurate classification and appropriate use of ancillary studies in endometrial lesions.
- Review the recent updates in the WHO classification of tumors of the gynecologic tract.
- Discuss the most common causes of inflammation and injury to the stomach.
- Identify the diagnostic considerations of eosinophilic tumors of the kidney.

No special educational preparation is required for this CME activity.
